## Basketball Parlay Calculator

### Submitted by:
Ivan Frederick N. Buagnin

### Description
This program computes the combined odds, possible payout,
and possible profit of a basketball parlay bet.
```

```
In [1]: print("=====")
print(" BASKETBALL PARLAY CALCULATOR ")
print("=====")

# User input
player1 = input("Enter Player 1: ")
odds1 = float(input("Enter Odds for Player 1: "))
